

## ABSTRACT OF THE DISCLOSURE

A plasma display panel comprising plural kinds of phosphors, each of which emits a light having a respective, different kind of color, separators which separate the plural kinds of phosphors and discharge cells having sustain electrode pairs which create discharges producing the light emissions from the phosphors. In the plasma display pane, sustain discharge currents through the sustain electrode pairs in the discharge cells are set respective, different values according to respective brightnesses of the lights emitted from the plural kinds of phosphors.
